Preface

This Current Publications Index replaces and updates the annual Statistics Canada Catalogue, the last issue of which was released in June 1985. The new title signals a change from a combined reference and sales catalogue to a document that is strictly a reference tool. The Index retains the same style, content and format, familiar to users of the former "Catalogue" but includes no prices or forms for ordering publications. Inquiries concerning price, ordering or availability should be addressed to Publication Sales, Ottawa, Ontario K1A 0T6 or to any of the Statistics Canada regional reference centres listed in the Introduction.

The Index contains a listing of numbered publications released by Statistics Canada up to June 30, 1986. Excluded are publications discontinued prior to Jan. 1, 1985, publications more than 10 years old and out of print publications (except 1981 Census). Publications discontinued during the period Jan. 1, 1985 to June 30, 1986 are so designated. For a full complement of Statistics Canada numbered publications the "Historical Catalogue of Statistics Canada Publications, 1918-1980" (11-512E) and subsequent annual Catalogues should be consulted.

Departmental publications, which were previously designated by an "X" placed between the 2nd and 3rd digits of the catalogue number, have been assigned new conventional 5 digit numbers and are listed according to the new numbers in the Index. A conversion table identifying the new catalogue numbers with the old "X" assignments is provided under the heading, "Catalogue Number Conversion Table".

The Current Publications Index was prepared and edited in the Communications Division of Statistics Canada.

Introduction

This Introduction explains how to use the Current Publications Index, notes other documents that are available and indicates where to obtain additional information or help. The four short sections that follow immediately after the Introduction record the changes which have occurred since the release of the 1985 Statistics Canada Catalogue. The book then divides into its two major sections, i.e. Publications and Index.

Section one is a listing of publications arranged by catalogue number and by subject. The entries include the catalogue number, title, frequency, language(s), number of pages, date of first issue (or the reference year of the publication), International Standard Serial (or Book) Number and a brief paragraph describing the contents of the publications.

The listing of *Products and Services of the 1981 Census* earlier used a 4-digit numbering system (e.g. E-482) for some 1981 Census departmental publications. To provide continuity, entries for these publications include the old 4-digit number added after the title. The 4-digit numbers are not referenced in the Index.

Section two is an alphabetical title, subject and commodity index, including a separate section for Census publications.

OTHER DATA FORMATS

CANSIM (Canadian Socio-Economic Information Management System)

CANSIM is Statistics Canada's computerized data bank and information retrieval service. It provides public access, in a variety of formats, to current and historical statistics, as well as specialized data manipulation and analysis packages, graphics facilities, and a bibliographic search service.

On-Line Access

The CANSIM Time Series data base (Main Base) offers detailed and conceptually compatible sets of aggregated time series on a large number of subjects, most of which pertain to business and the economy. The Main Base, now comprising over 400,000 series, is maintained for public access at a commercial data processing service bureau. A subset of the complete base, known as the Mini Base, is

distributed by licensed secondary distributors who, in turn, offer the public a wide variety of data access services.

Data Retrieval Services

CANSIM retrieval services are also offered by Statistics Canada personnel. CANSIM time series data can be obtained in conventional tabular formats, and in a wide variety of colour graphic forms. This service gives an added dimension to the analysis of statistics, and includes many ancillary options for listing and transforming retrieved data.

Further, CANSIM provides retrieval services to meet specific user requirements for data on two other systems it maintains: the CANSIM Cross-classified data base, which features statistical tables containing social and economic data; and the Census Summary Data System, which comprises 1976 and 1981 Census characteristics for various geographical areas. CANSIM staff also distributes Census Summary Tapes.

Microcomputer Products

Many users employ CANSIM data as inputs to spreadsheet or other programs which they implement on microcomputers; to accommodate such users, CANSIM provides customized packaging of data onto microcomputer diskette. Direct downloading of data by subscribers can be performed from the Main Base. An electronic fact-sheet retrieval service is also available.

Bibliographic Search Services

CANSIM also maintains a bibliographic information search service to produce customized inventories of data pertaining to a given topic or group of topics. The information data base consists of an online directory of all CANSIM-disseminated data, and bibliographic references to current publications.

Manufacturing

Description of Reports

Publications listed under "Manufacturing" relate to Division E of the Standard Industrial Classification.

Some of these reports provide summarized and analytical information for manufacturing as a whole, others provide detailed information on individual manufacturing industries or on various commodities.

Although titles of the various reports are broadly indicative of the subject matter covered, explanatory notes have been included under title headings where necessary. Such notes are generally restricted to reports on the manufacturing industries as a whole (sub-group 31) and to those publications on commodities. The reports on individual industries are generally similar to each other in character and include such principal statistics as: number of establishments, number and type of employees, and their salaries and wages, cost of fuel and electricity, value of shipments of goods of own manufacture, and value added. Comparative statistics are given for Canada for earlier years and for the preceding year for provinces. Also shown are the value and, where applicable, quantities of major products shipped and purchased materials used by establishments classified to the industry. Some reports show total manufacturers' shipments of relevant commodities without regard to industry of origin, but this is given comprehensively for all commodities in an annual report on products shipped by Canadian manufacturers.

Primarily because annual surveys cannot be initiated until the end of the calendar year and because of the time required to collect, edit and compile extensive data, most annual industry reports are not available until a year or more after the end of the year of the survey.

In addition, there are a large number of publications that are published more frequently than once a year and that contain current information on commodities (generally shipments, production or consumption). Although not exactly suitable to industry analyses, except in the case of one-industry commodities, they have proven to be most useful in commodity analyses.

Current estimates of the value of shipments, inventories and orders for manufacturing industries in total, numerous sub-aggregations and selected industries are issued monthly. They are based on a sample survey of establishments representing about 75% of the shipments, determined from the Census of Manufactures.

- 89-504E Intermetropolitan Migration in Canada: Changing Determinants Over Three Decades,** 1986. By R. Paul Shaw Occasional E. and F. 220 pp. ISBN 0-660-11754-1

This paper traces the history of the CMA/CA program up to the 1981 Census, both in terms of the concept and the areas themselves. Two important features of the paper are tables showing comparative population counts for CMAs and CAs in each census year since 1941 and for the largest CMAs and CAs, a set of maps showing the actual delineations for these areas over the same period.
